

## Slope of Special Line Segments

There are two special slopes you should memorize and two trends you should be familiar with:

The slope of a horizontal line is always 0.

$$m = \text{rise} / \text{run}$$

$$m = 0 / \text{run}$$

$$m = 0$$

The slope of a vertical line is always undefined.

$$m = \text{rise} / \text{run}$$

$$m = \text{rise} / 0$$

$$m = \text{undefined}$$
